

# GitHub COMMIT HISTORY

### Description:

This visualization shows how much code exists for a particular person in the repository at a particular time. I will be tracking the additions and deletion made by the every person at the specific times after which they will be plotted on the same line graph.

This visualization will allow us to track who has committed the most code to the repository at any time. This kind of visualization is important especially on an open source platform like GitHub because there is sort of a competition between developers as to who is doing better. Most recruiters will also like to see this information when considering candidates they want to offer jobs.
